SOLID ENGINEERING - CUSTOM PARTS - SUPERIOR FINISH

- Triangular design from Carbon Fiber for best strength to weight ratio
- Automotive grade UV-resistant clear polyurethane finish
- Additional high quality materials include 316 Stainless Steel attachment hardware, Titanium or Carbon Fiber shafts, G10 Fiberglass hinge tube, and Anodized Aluminum 6061 brackets

US Patent 9643701

CHOOSING YOUR BOWSPRIT AND INSTALLATION METHOD

The choice of Bowsprit would depend on several factors:

- ▶ The length and weight of your boat
- ▶ The sail area
- ▶ Your type of sailing - cruising or racing

A general guide:

- AS-30: boats up to 30'
- AS-30R: boats up to 30+' (racers & heavier boats)
- AS-40: boats up to 40'
- AS-50: boats up to 50' (racers & heavier boats)

What installation method is best?

Through hull: Perfect when you want to keep your deck clear and there are no obstructions inside the bow. We recommend this as it is the strongest installation method.

Side Mounts - carbon fiber: Suitable for yachts with narrow bow angles including trimarans. The Bowsprit attachment point is moved forward offering more extension past the bow.

Deck mounting: Our U brackets are ideal for boats that have bow anchor rollers or obstructions inside the bow. Brackets sets for Catamarans are also available.

Custom mounting: We have worked closely with owners and riggers worldwide to advise on best methods and even design attachment parts as needed.
